SUMMARY

Second-year CS student at CMR Technical Campus focused on backend systems, real-time applications, and automation. Work with Node.js, Socket.IO, Java, and REST APIs. Contributed to Rocket.Chat and active in GSSoC 2026, NSoC 2026, and SSoC 2026. Interested in startups and building things people actually use.

TECHNICAL SKILLS

Languages:	C, Java, Python, JavaScript
Web and Backend:	Node.js, Express.js, Socket.IO, REST APIs, PHP, MySQL, HTML, CSS
Data Engineering:	MySQL, SQL views, ETL pipelines, schema design, API ingestion, web scraping (BeautifulSoup, Jsoup)
Tools:	Git, GitHub, GitHub Actions, cron scheduling, Render
Core Concepts:	Data Structures and Algorithms, OOP, Real-Time Systems, Event-Driven Architecture

EDUCATION

CMR Technical Campus, Hyderabad | B.Tech, Computer Science and Engineering | CGPA: 8.52 / 10.0 Expected: May 2028

OPEN SOURCE

Rocket.Chat | TypeScript, Testing | GSOC 2026 Preparation | [Merged PR #39853](#)

- Raised 3 PRs in the message-parser module (#39455, #39737, #39733) covering timestamp parsing, isNodeOfType test coverage, and emoji edge case handling in reducePlainTexts
- Consolidated by maintainer ggazzo into batch PR #39853 with 10 contributors and shipped to the develop branch

GSSoC 2026 (GirlScript Summer of Code)

- 15+ PRs merged across multiple repos covering frontend fixes, backend enhancements, and workflow improvements

NSoC 2026 | Nexus Summer of Code

- 20+ PRs merged across frontend and backend repos covering bug fixes, dynamic rendering, pagination support, and API response standardization

SSoC 2026 (Social Summer of Code) | Selected as contributor

PROJECTS

Open Chat Application | Node.js, Express.js, Socket.IO | [GitHub](#) | [Live Demo](#)

- Real-time WebSocket chat app supporting 100 concurrent users per room with configurable capacity and automatic room cleanup on disconnect
- Password-protected private rooms with in-memory session tracking and debounced typing indicators to reduce redundant socket broadcasts

LeetCode Grind Tracker | Python, PHP, MySQL, JavaScript | [GitHub](#)

- ETL pipeline where Python pulls daily submission data into MySQL, PHP exposes a REST API, and a JS dashboard visualizes difficulty breakdowns, streaks, and weak topics
- SQL views for per-topic performance analysis so practice targets actual weak areas rather than random problems

LeetCode Discord Reporter | Python, GitHub Actions | [GitHub](#)

- Zero-maintenance pipeline using GitHub Actions and cron-job.org that auto-posts daily LeetCode solves to Discord at 10:15 PM IST
- Runs continuously via scheduled automation with end-to-end ownership from ingestion to delivery

Web Scraper | Python, Java, BeautifulSoup, Jsoup | [GitHub](#)

- Extracts structured data from unstructured HTML in both Python and Java with clean CSV output, edge case handling, and reliable execution

COMPETITIVE PROGRAMMING

- LeetCode: 350+ problems | Rating 1720 max | 45+ contests
- CodeChef: 170+ problems | 2 Star | 25+ contests
- Codeforces: 45+ solved | 900+ rating | 13+ contests

CERTIFICATIONS AND ACHIEVEMENTS

- Technovanza 5.0 Hackathon: selected for Smart India Hackathon (SIH) 2025 at CMR Technical Campus
- IoT Bootcamp, Sansa Innovations Pvt. Ltd.
- C Programming Certification, Spoken Tutorial, IIT Bombay
